Elegant Touch, Intuitive Control

The innovative touch-sensitive gain adjustment button offers a smooth tactile experience, providing an intuitive and convenient method for balancing the gain and achieving effortless image optimization across various scenarios.

Smart Sensing, Easy Observation

TGC integrates seamlessly with the control panel, allowing precise adjustments even in a dark ultrasound room and provides a more comfortable visual experience, capturing image details with ease.

Enhanced Protection, Upgraded Reliability

The next-generation protective design features a control panel with enhanced waterproof, dustproof, and hair-resistant properties. It is easier to clean and disinfect, effortlessly handling various scanning scenarios, and effectively extending the device's lifespan.

Enhanced Clarity, Effortless Scanning

HR Flow

An innovative technology enhances the visualization of micro-vascular or complex flow patterns by applying Mindray Animal's exclusive processing algorithms. HR Flow can be applied to Color and Power Doppler imaging modes.

iTouch

iTouch allows for the automatic optimization of imaging parameters with one click to quickly obtain better image quality.

iClear

This intelligent image processing technology effectively suppresses speckle noise in 2D images, enhancing the image contrast resolution and making tissue boundaries clearer.

Capable Functions, Reliable Results

Natural Touch Elastography

Mindray Animal Medical's patented Natural Touch Elastography technology provides accurate and reproducible assessments of soft tissue elasticity and stiffness.

Contrast Imaging

This technology with high sensitivity ensures clear and detailed visualization for better diagnostic accuracy.

Convenient Tools, Confident Diagnosis

Smart Calc

Automatic trace, measurement, and calculation tool. Smart Calc can encircle the boundary of the lesion and provide multiple accurate measurements.

Smart HRI

Assess liver steatosis quantitatively. Smart HRI uses 2D image for automatic organ recognition and brightness ratio calculation of liver and renal cortex, providing more accurate and reliable data.

iWorks

Customizable, animal-specific, standardized scanning protocols for diverse clinical applications. Annotations, body marks, and color can be automatically added to save time and reduce keystrokes.

iReport

iReport provides customized report templates with professional comments for different diagnostic needs.

Step 1
Select Diagnosis Description

Step 2
Enter Measurement Values

Step 3
Save and Print Report
